NEW DISTRIBUTION GROUP REVIVES A TRUSTED NAME IN THERMOPLASTIC DISTRIBUTION IN NORTH AMERICA

The new General Polymers Thermoplastic Materials offers total support to small-to-medium sized processors with a focus on prime certifiable engineering thermoplastic resins from a select group of quality supply partners.

CLARKSTON, MI (October 17, 2016) – With the emphasis on providing quick product recommendation, pricing, availability and high levels of personalized customer service, newly formed **General Polymers Thermoplastic Materials LLC** opened its doors October 15, 2016 in response to market demands from both prime thermoplastic suppliers and small-to-medium sized users for improved supply, access and support for engineering resin distribution.

The firm already reports a growing base of customers from among product designers, molders and development partners throughout the North American marketplace.

General Polymers Thermoplastic Materials LLC of Clarkston, MI (Detroit metropolitan area) is the creation of *Gregory Boston (former executive of General Polymers-Ashland Distribution, EMS-Grivory, & Asahi Kasei)* and *Michael Kirtley (President of Spartan Polymers & formerly of Channel Prime Alliance, Ostermann, & Delta Polymers)*. Their new firm will focus on providing material/technical service and support to small-to medium sized customers throughout North America.

"The creation of 'Supersized Distributors' through the consolidation of smaller distribution entities into larger multinational organizations has provided a space for a new entry in national distribution," says partner Gregory Boston. "We are honoring the lessons that Michael and I learned during the early days of authorized resin distribution where relationships with resin producers and a focus on small to medium sized processors were important in the industry. The industry has matured and grown since the original General Polymers days, but understanding your product line & providing value to the processing industry has remained constant."

Initial plans were to start with commercial coverage in the Midwest, but has quickly expanded into other areas of the United States & Canada. "We planned our launch of General Polymers with a focus on the Detroit metro area, but were quickly presented opportunities to support experienced professionals in other regions of the US," explains Michael Kirtley. "In addition, our supply partners are pleased with our expanded geography and commitment to focus our efforts on their brands." Having over a third of the US covered from Ontario west to Illinois & Kansas and south to Georgia, General Polymers Thermoplastic Materials is well on its way to national coverage.
